Army Air Service Accepts Device Which Discharges Pound Shells Through Hub of Propeller.

A REPTANCE by the Army Air Bervice of an airplane motor which while driving a plane in flight automatically shoots in rapid succession shells one and a half inches in diameter and weighing a pound was announced here to-day by the Manufacturers' Aircraft Association. The airplane cannon, which is of Wright-Hispano design, was built to pierce armored airplanes, tanks, submarines and dirigibles.

The motor is a modification of those used in the war. Unlike the airplane machine guns, which shoot through the propeller blades, the airplane cannon is arranged inside the propeller shaft and shoots through the hub of the propeller. Two machine guns are attached to and synchronized with the motor for use where the envier shots would be unneces-
